ENGLAND

SWALLOW & SWIFT Now with Steel Rails

Thanks to the success that our popular racing saddles are achieving we decided to introduce the Swallow and the Swift with steel rails.

The Swallow Classic reproduces the timeless design of the daddy of all modern racing saddles, first produced in 1937. It is now available in 2 versions, one featuring the light titanium metalwork and a new one featuring the original chrome plated steel metalwork. The tensioning plate on the underside still bares the original patenting information retaining the word DEPOSÉ, as the patent for this model was first registered in Paris. Back then many Brooks saddles were in fact exported to the continent to be used by racers in the tours.

The Swift is one of the first Brooks "modern" gent's racing saddles. It was traditionally only available with titanium rails, but since 2007 it is also manufactured with a chrome plated steel metalwork. Both versions feature skived sides and hand hammered copper rivets.

	Length	Width	Weight Ti	Weight Steel
Swallow	287 mm	153 mm	360 g	490 g
Swift	280 mm	152 mm	370 g	495 g

BROOKS ENGLAND LTD.

*It is not the name of Brooks which makes the saddle good,
but the saddle and its excellence which makes the name supreme.*

(from The Brooks Book for Cyclists 1912)
